

Z Electronic Tipper

Add colours to your embossed cards

The Z Electronic Tipper is a stand-alone device for tipping embossed characters. It is ideal as a complementary unit to the Z1 and Z2 Plastic Card Embossers to give membership and loyalty cards an elegant touch. Even bank branch-offices or department stores can use the Z Electronic Tipper to offer their customers the possibility to re-colour their credit/debit cards or membership/loyalty cards once the initial tipping has been consumed due to usage.

Its extremely compact design and small footprint enables it to be placed in any office, reception, store or branch environment alongside other office equipment.

Very easy to operate, the Z Electronic Tipper allows easy adjustment of temperature and pressure to always obtain a perfect result. Furthermore, the **power saving function** results in lower power consumption

when the machine is idle, but in stand-by mode.

The tipping ribbon, for which there are several different colours available, is mounted on a handy cartridge for quick and easy replacement.

Z Electronic Tipper
